## Early Warning Project Statistical Risk Assessment Data Dictionary

Jay Ulfelder

September 9, 2014

## 1 Introduction

This document describes the variables in a data set used by the Early Warning Project to generate statistical assessments of the risk of onsets of state-led mass killing episodes in countries worldwide. All of the data compiled here are in the public domain and available free of charge. Sources of variables are identified by a three-letter prefix. In almost all cases, the variable name from the original source has been preserved. For more information about those variables, see the documentation associated with that original source.

- mkl = Early Warning Project's Episodes of State-Led Mass Killing Dataset
- wdi = World Bank's World Development Indicators (via R package 'WDI')
- mev = Center for Systemic Peace's Major Episodes of Political Violence
- pol = Polity IV
- imr = U.S. Bureau of the Census, International Division (via PITF)
- cmm = Center for Systemic Peace's List of Coups d'Etat
- cpt = Powell and Thyne's Coups d'Etat, 1950 to Present
- cou = An amalgamation of cmm and cpt data
- pit = PITF Problem Set (i.e., episodes of instability)
- dis = Center for Systemic Peace's Discrimination Data Set (via PITF)
- imf = International Monetary Fund's World Economic Outlook Report
- elf = Anderson's Ethnic Fractionalization Data
- hum = Farris et al.'s Latent Human Rights Protection Scores

- fiw = Freedom House's Freedom in the World Data Set
- aut = Geddes, Wright, and Frantz's Authoritarian Regimes Dataset

Complete replication materials for these statistical risk assessments—including the data set this dictionary describes, the raw data from which it was derived, and the R scripts used to do all of that work—can be found in this GitHub repository.
